

## HARDWOOD PLANTERS

### Product description

These high quality planters are made from tropical hardwood. This ensures that they are environmentally sustainable and they give a warm and natural appearance. We only use hardwood with durability class 2. Due to the high durability of the wood no further treatment is required. If the planters are not treated they will gradually age, which has no influence on the quality of the planters. They are constructed using stainless steel fasteners, the inside is wrapped with EPDM and the bottom with an anti-root fabric.

## SPECIFICATIONS

### General information

Our planters consist out of:

- Material thickness: 21 mm
- 15 or 90 mm high feet
- Reinforcements against deformation
- Stainless steel fasteners
- 5 year warranty (descending)

### Options

- Wheels (not all models)
- Infinity system (page 3)
- Custom made

### Wood

- Durability class 2 hardwood
- Warm appearance

## IMPORTANT

### Points of attention

- The products must be unpacked immediately after delivery.
- Our planters are not suitable to move once filled.
- Every kind of (hard) wood will turn grey under the influence of UV radiation, weather and wind. The final colour depends on the starting colour.
- Wood is a natural product that "works" and will shrink or expand depending on temperature and moisture content. Regularly oiling the wood ensures that the moisture content remains more stable and that "work" remains limited.
- Like almost all types of wood, hardwood reacts to contact with iron, this can cause strong discolouration (can be visually confused with mould): only use stainless steel screws.
- Remove metal chips from your tools (bits and drills) beforehand.
- Avoid contact with lawn fertilizer and cement (these contain traces of iron).

### Maintenance

- Any type of (hard) wood will turn grey under the influence of UV radiation, weather and wind. Regular cleaning (WOCA exterior cleaner) and sealing (WOCA exterior oil) of the wood ensures that the pigment in the wood is retained longer and the discolouration process is delayed.

**Note!** Do not use a high-pressure cleaner.

# PLACEMENT

## PLACEMENT

1. Provide a flat, solid surface. If not done carefully, it can create tension in the product which can result in damage to the product.
2. Reinforcements in planters are essential for the construction and dimensional stability of the planter. Reinforcements must never be removed!
3. Always provide sufficient breathing space (minimum 1 cm) around the planters to prevent moisture trapping.

## PLANTING ADVICE

5. Fill the planter with a layer of hydro grains about 10cm high. Place a moisture-permeable anti-root cloth over the hydro grains.

**Note!** Raise the cloth at the edges at least 10 cm for an ideal effect.

6. Cover the anti-root cloth with a layer of airy soil mixture adapted to the planting to be applied.

**Note!** The soil in the planter should never be tamped down, this can cause damage to the planter.

# INFINITY SYSTEM

## INFINITY SYSTEM

Thanks to the infinity system, it is possible to create an "infinitely" long planter (delivered in sections). All supplies for connecting the planters are included.
